Dark Energy Survey (DES) Collaboration

- ~400 collaborators, of which ~70% are students and postdocs

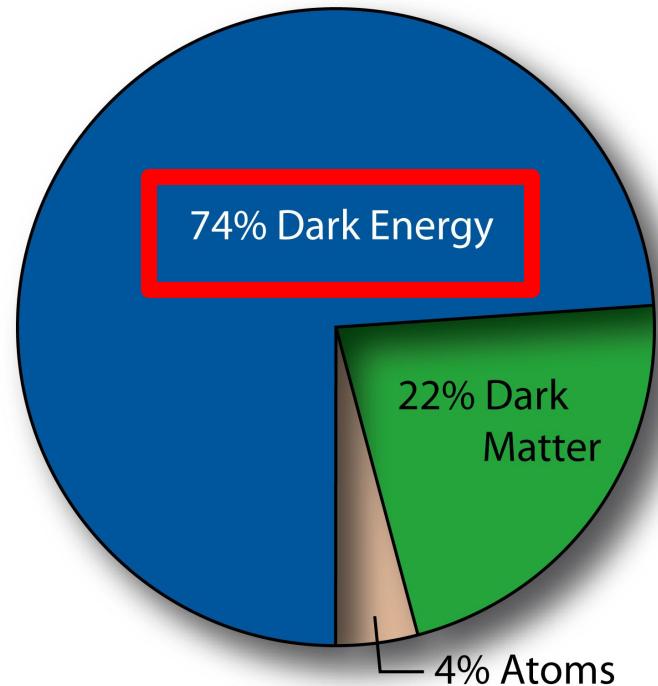

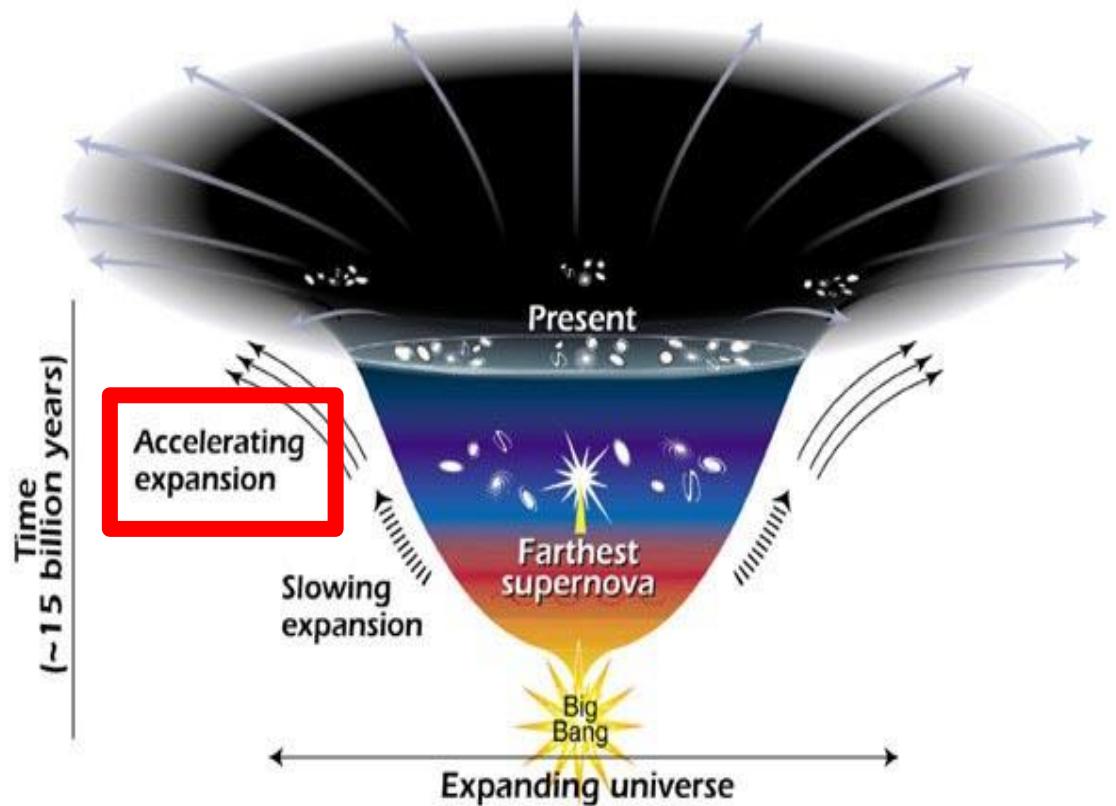

Dark Energy Survey Member Institutions

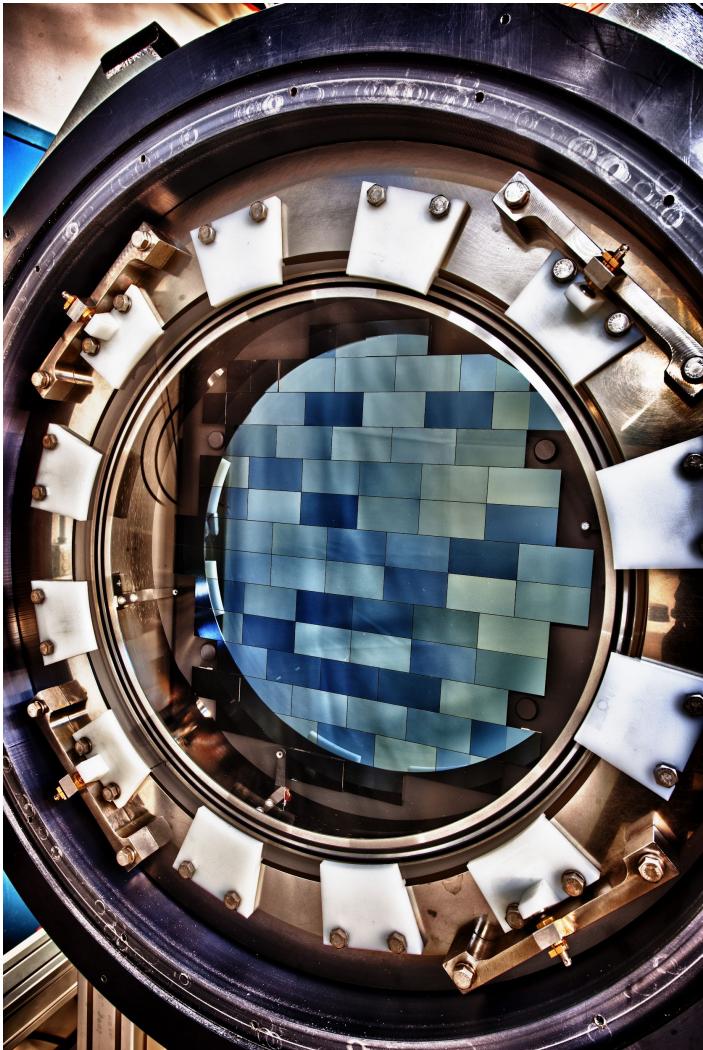

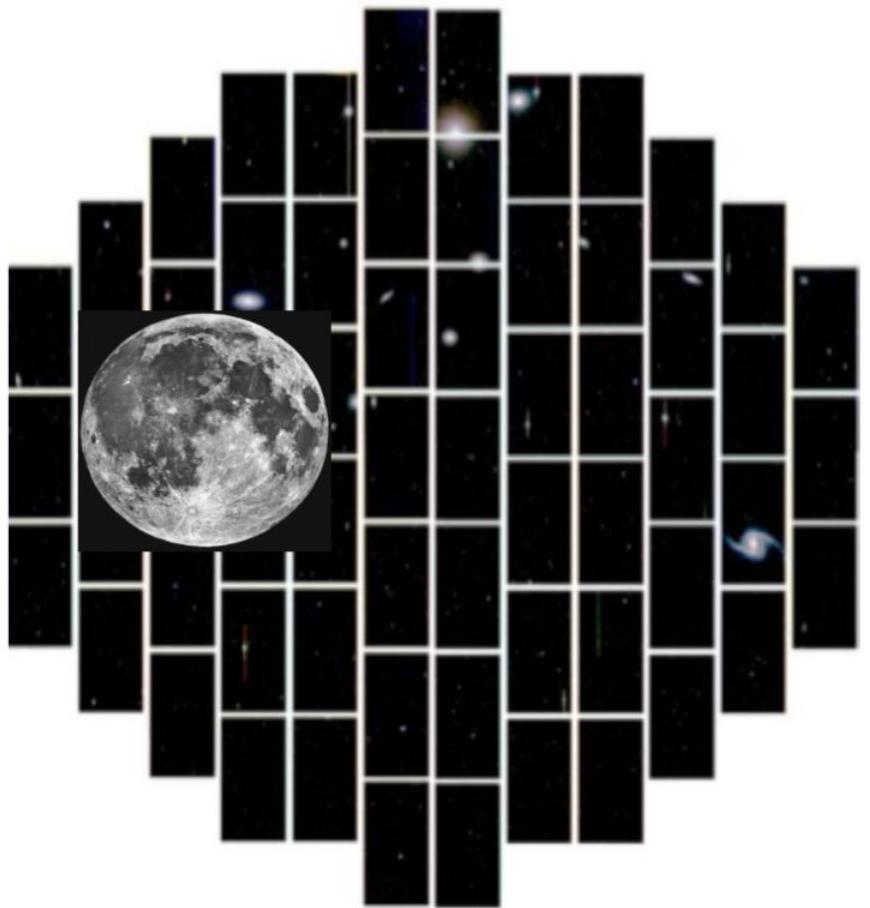

Fermilab, UIUC/NCSA, University of Chicago, LBNL, NOAO, University of Michigan, University of Pennsylvania, Argonne National Laboratory, Ohio State University, Santa-Cruz/SLAC/Stanford Consortium, Texas A&M (+scientists at CMU, Arizona, Brandeis, Wisconsin,...)

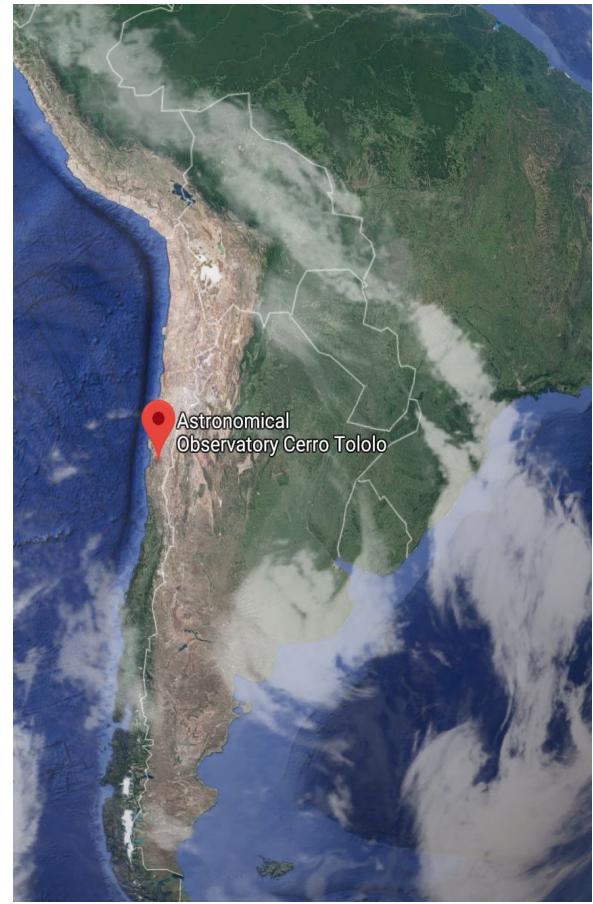

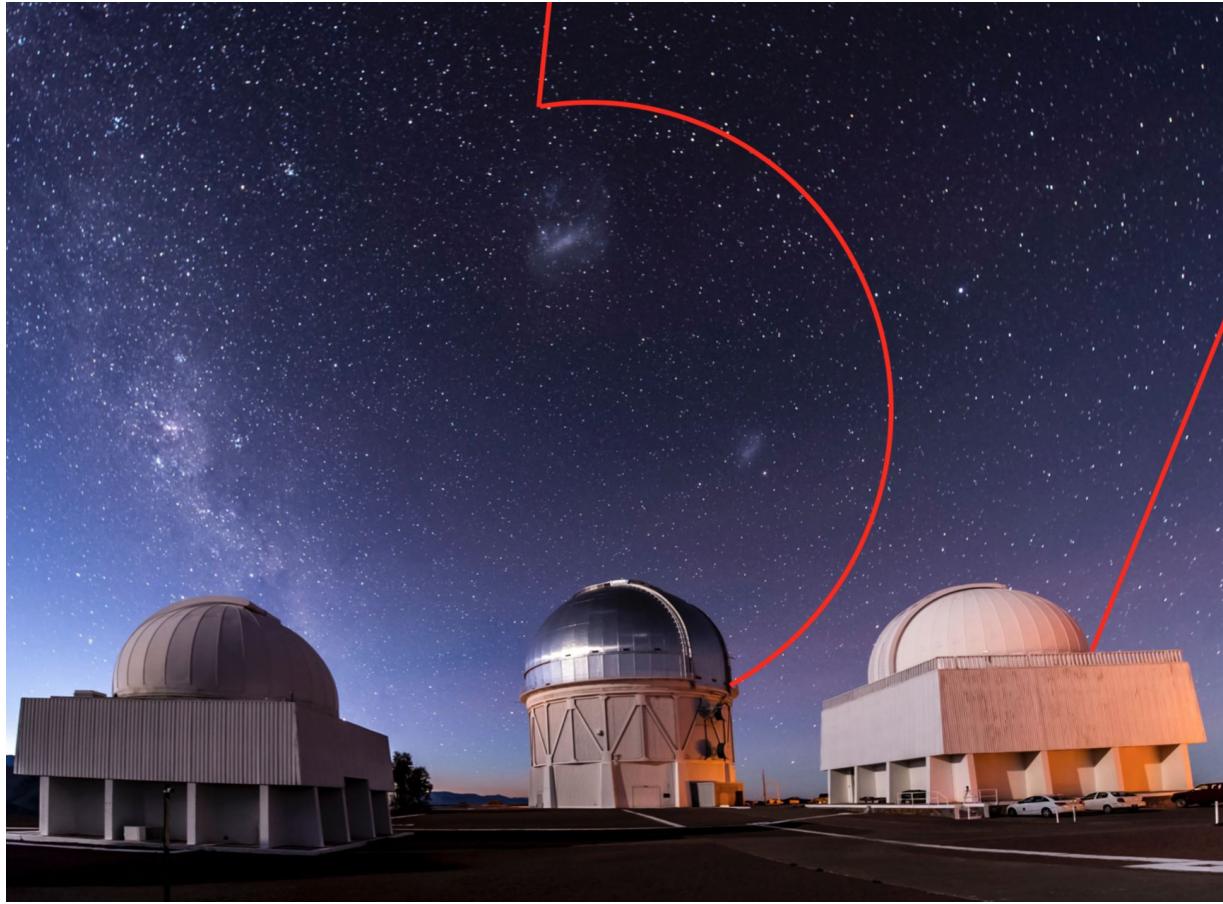

Dark Energy Survey Science Goals

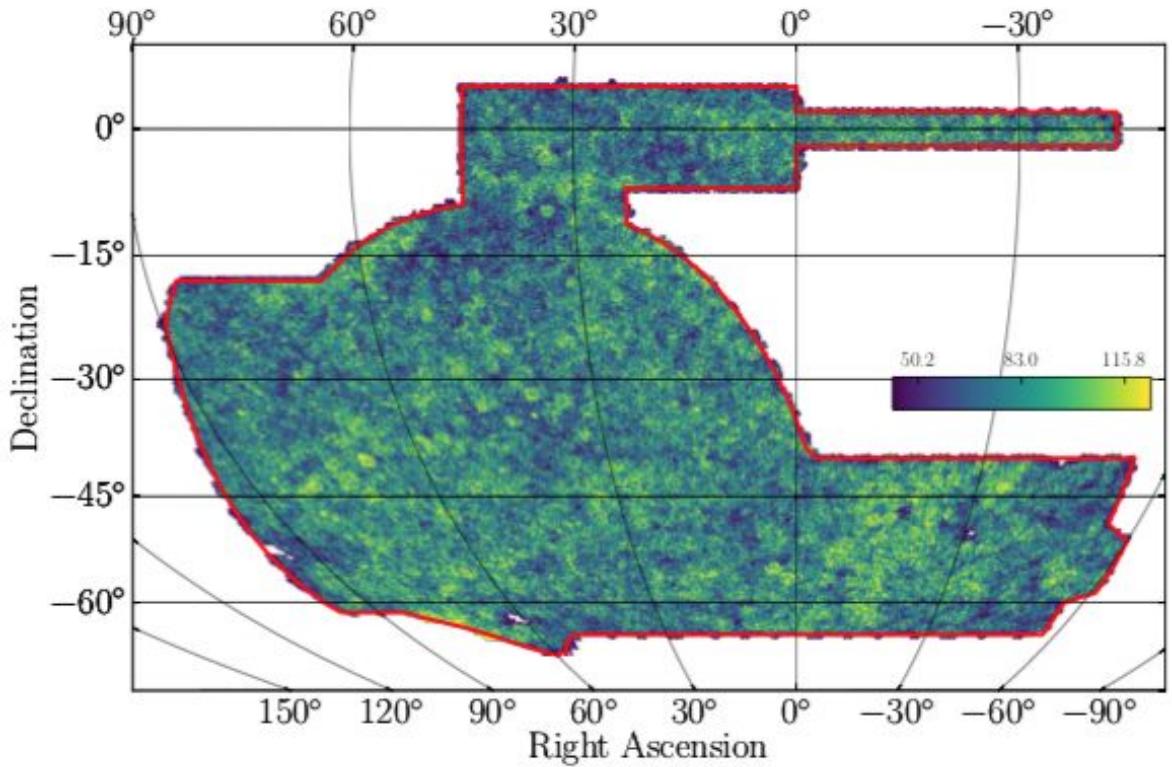

Dark Energy Camera

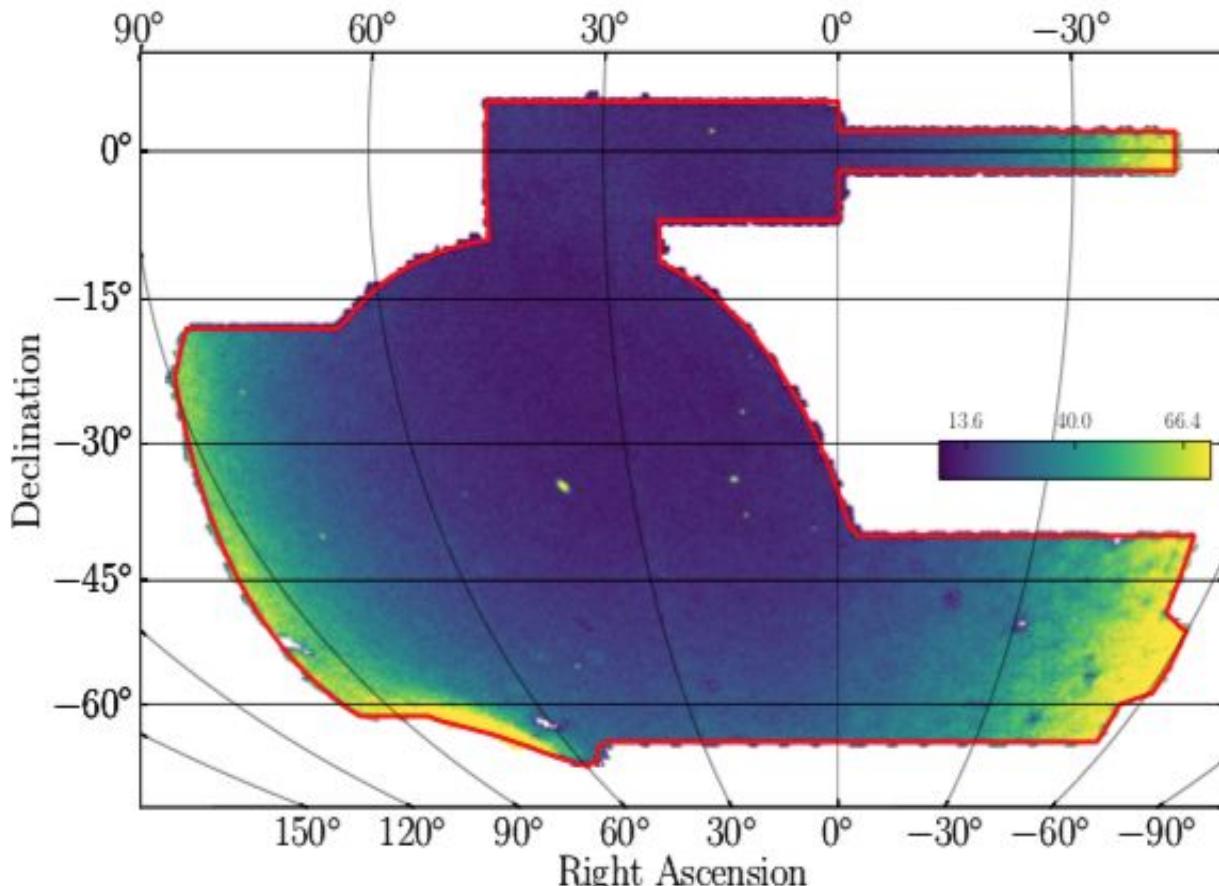

DES Data Release 1: Galaxies

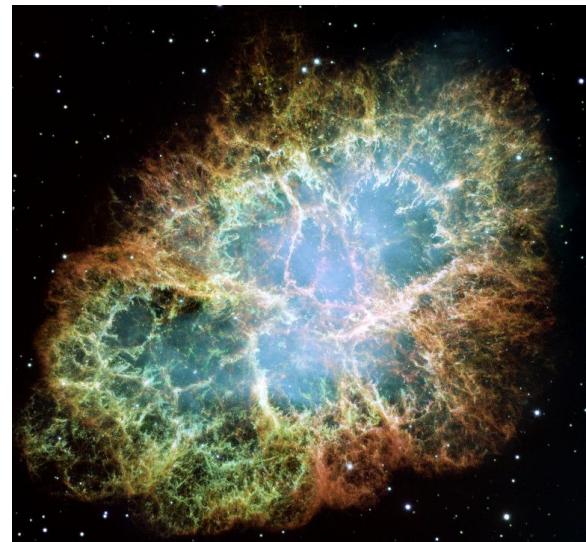

DES Collaboration [1]

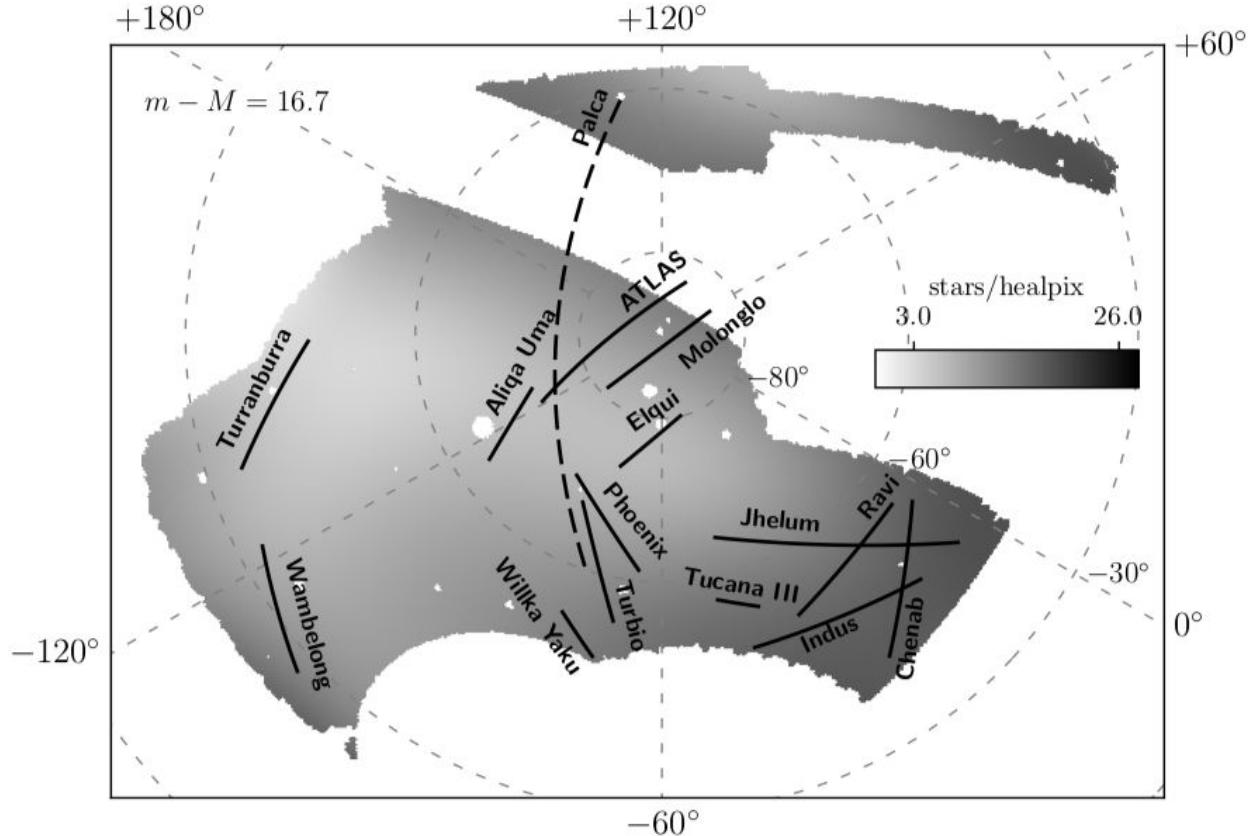

DES Data Release 1: Stars

DES Collaboration [1]

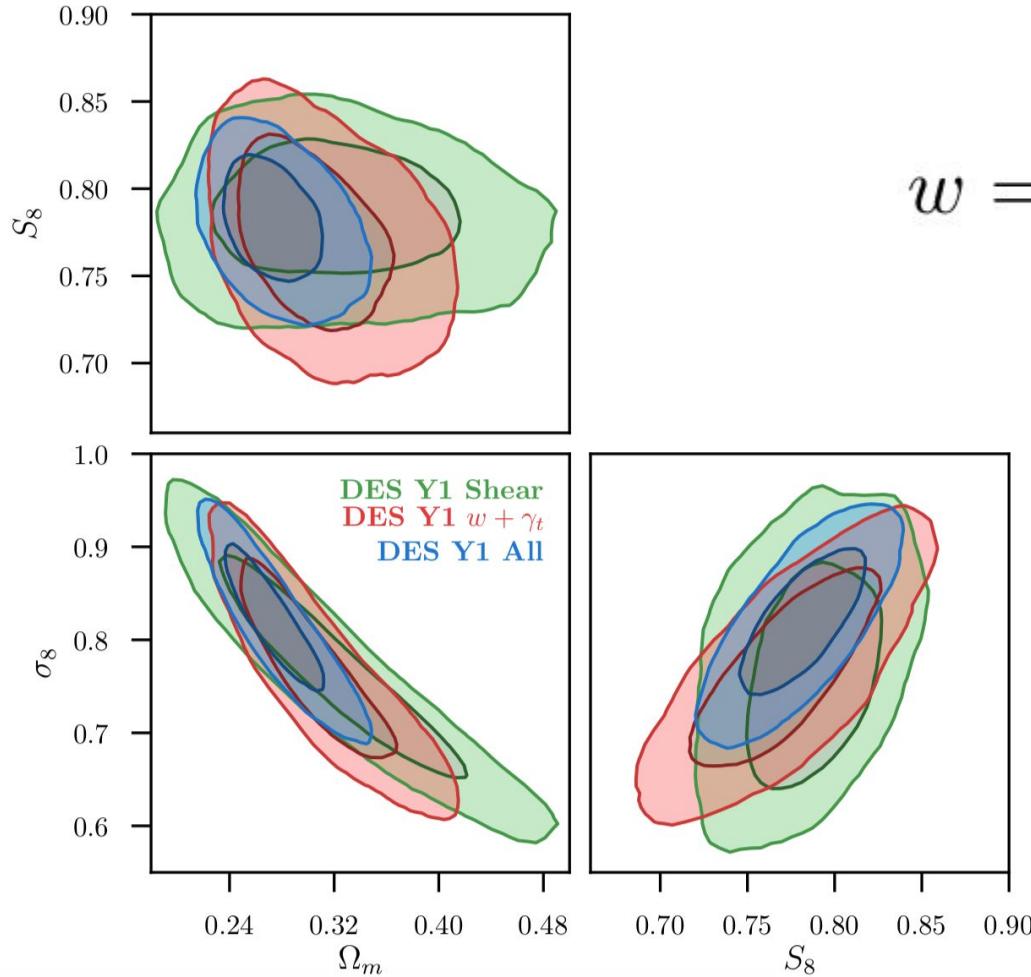

DES DR1 discovered 11 stellar streams

Shipp et al. [2]

DES Y1 constraints on cosmological parameters

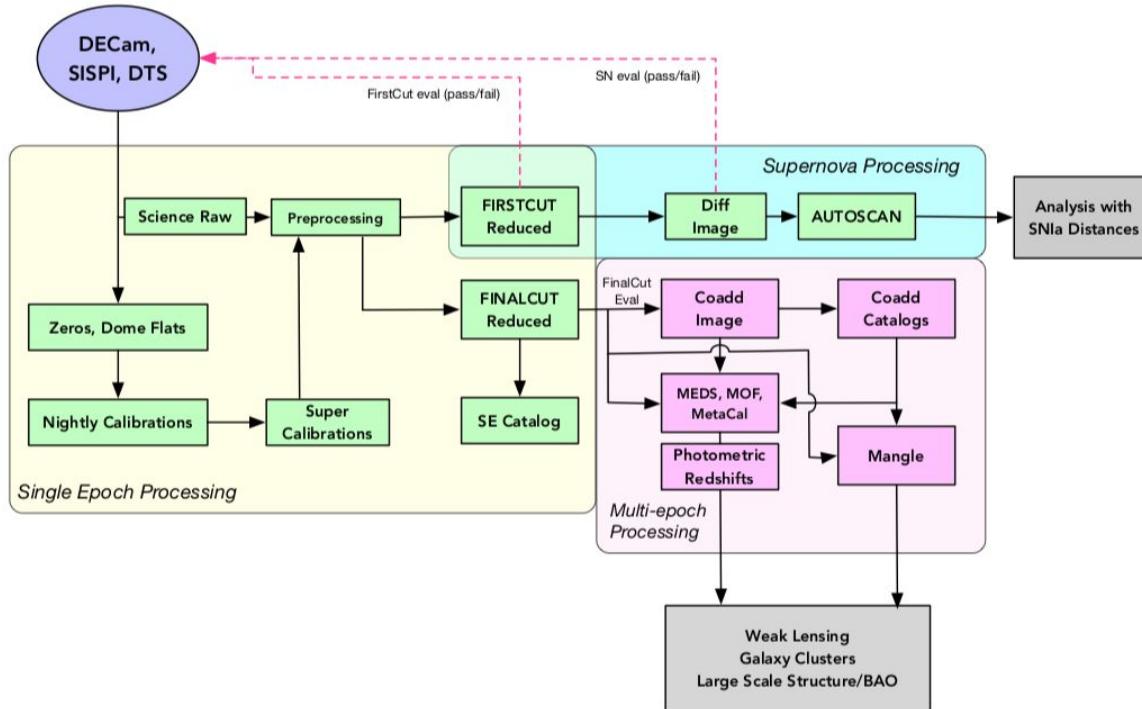

$$w = -1.00^{+0.04}_{-0.05}$$

DES Collaboration [3]

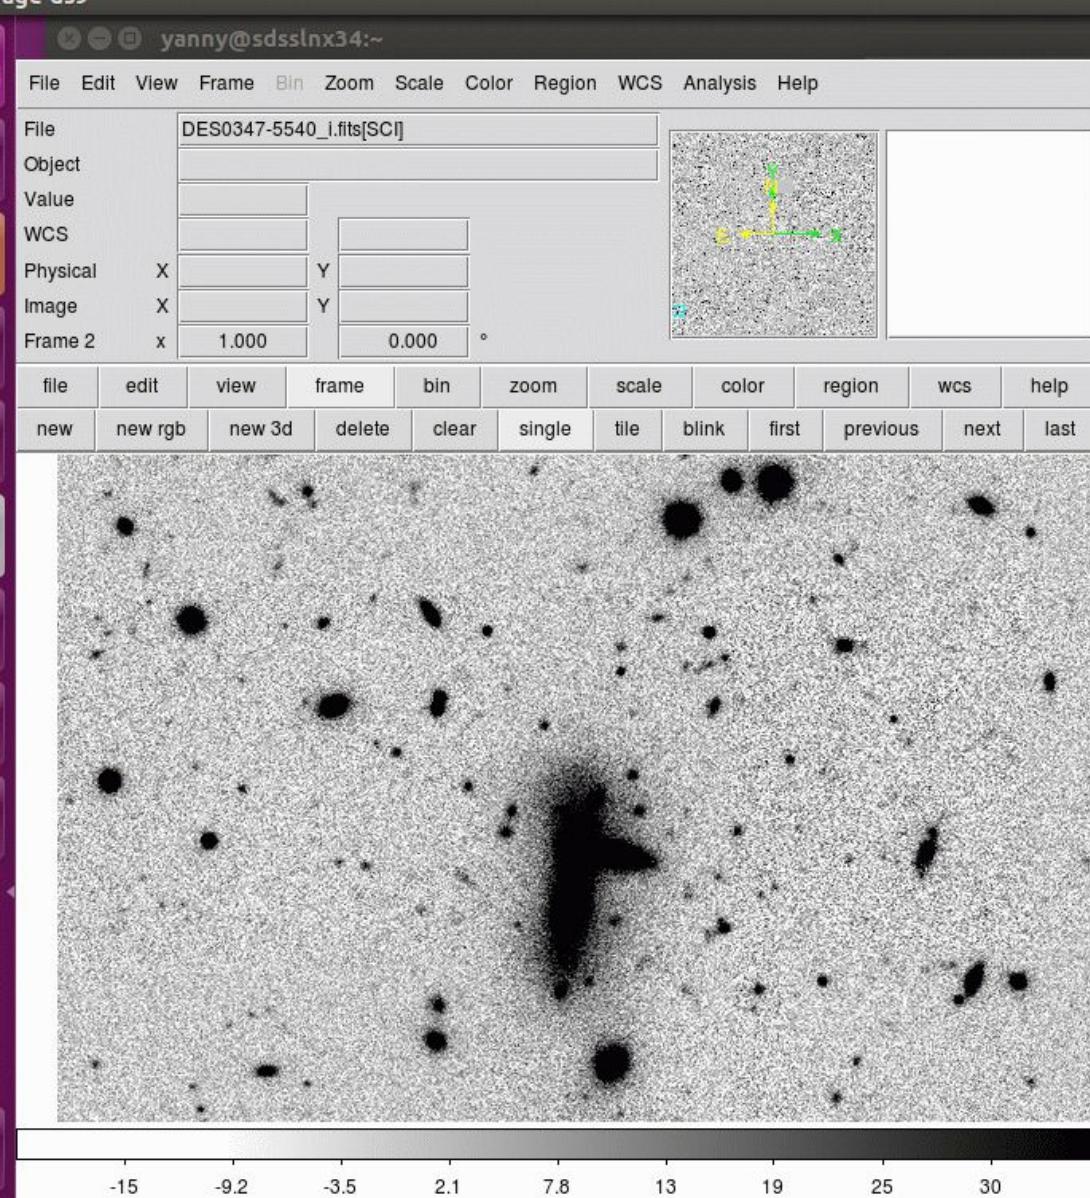

Balrog

- “digging too deeply and too greedily into data”
- Understand systematic biases → useful for **all** DES working groups

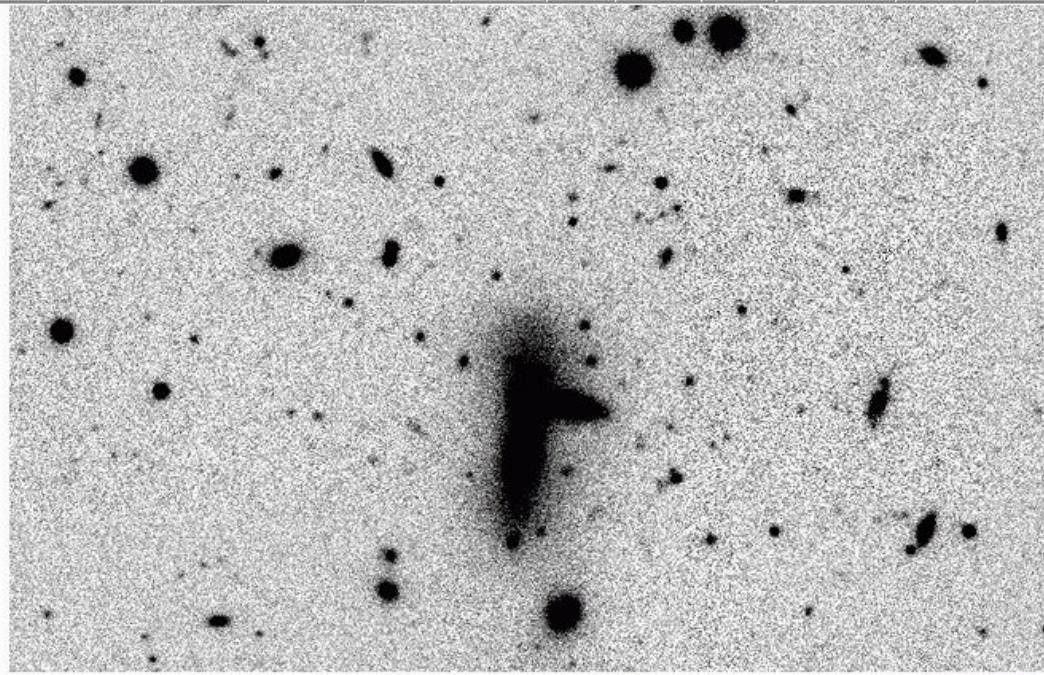

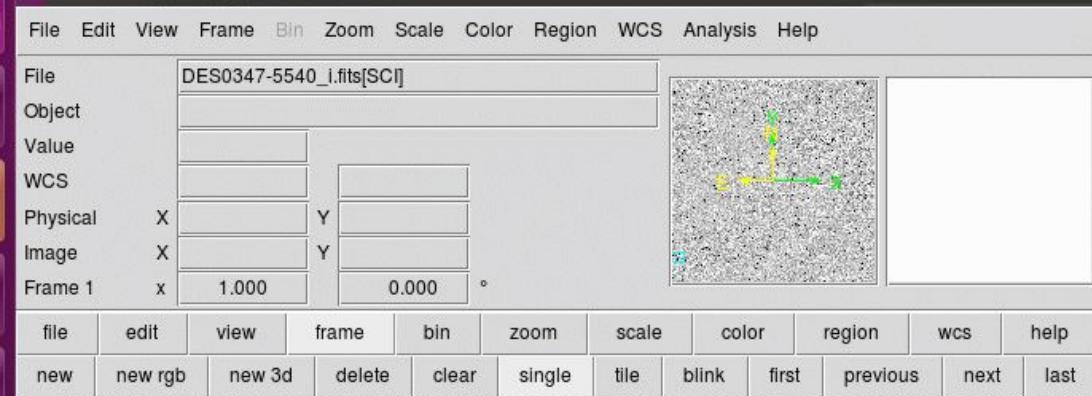

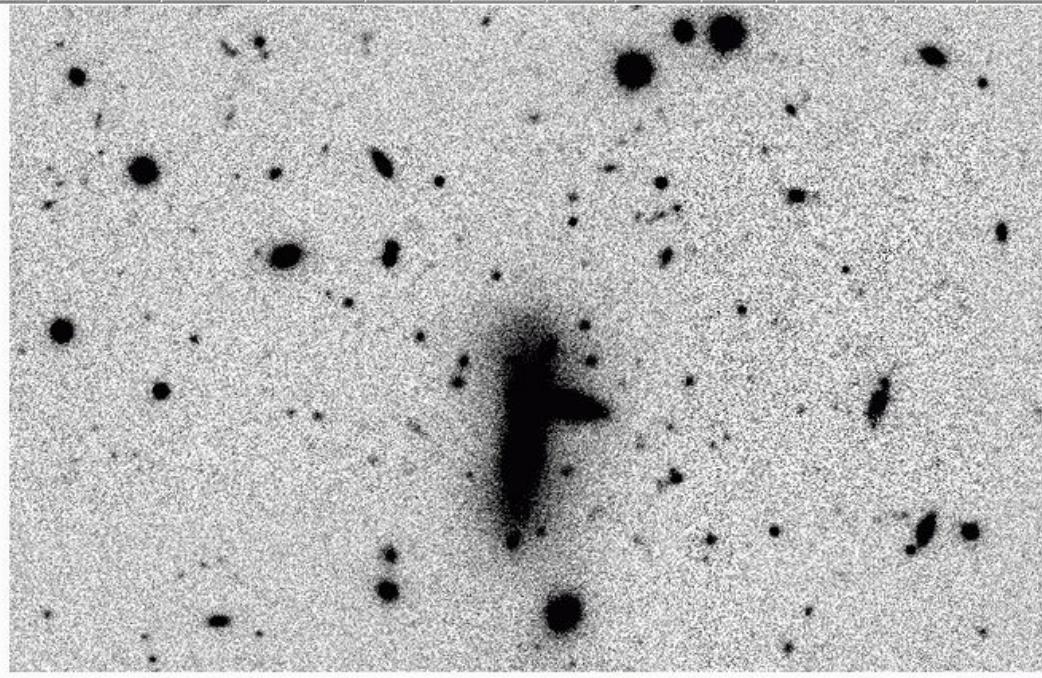

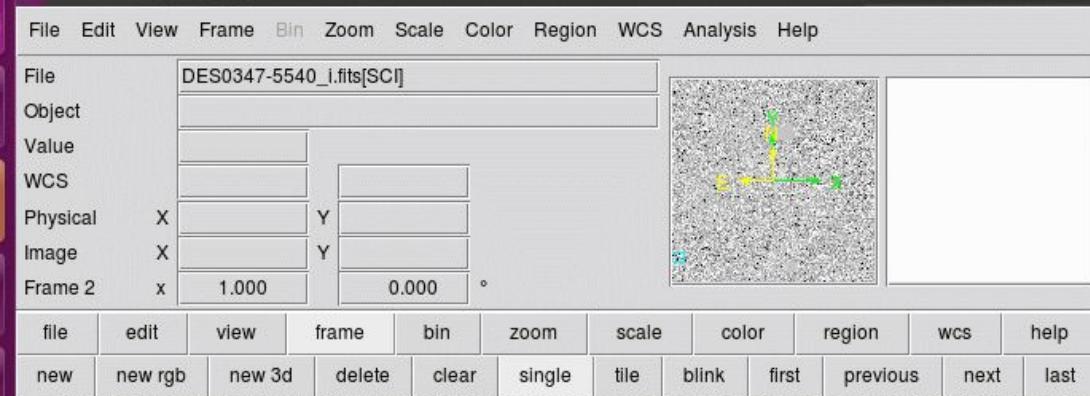

DESDM pipeline schematic [4]

Balrog injections

Balrog validation

- Inject fake objects onto real images. Compare **truth**, **real**, and **injected** catalogs
- Agreement between **real & injected** and **truth & injected**?

Balrog overview [5]

Summary

- Tons of science is done with DES data (**much** more than discussed here)
- Balrog has the potential to help DES utilize more of its data

Dark Energy Survey Working Groups

- Galaxy Clusters
- Supernovae
- Weak Lensing
- Theory and Combined Probes
- Milky Way
- Strong Lensing
- Large-Scale Structure
- Simulations
- Redshift
- Galaxy Evolution & QSO
- Transients & Moving Objects
- Science Release
- Science Committee
